

WEB CONTENT AND TOUCH / MOBILE DEVICES

Although we attempt to make the training courses compatible with all devices and cross platform web browsers, not all content may display as intended on mobile devices and tablets such as an iPad or Android device.

These items include, mouse over hover states, and embedded MP4 videos within the presentations and other interactive content.

We recommend that you access the courses via a desktop computer with a mouse or via the Moodle Mobile app to ensure that you gain the full user experience. **We also recommend using a tablet such as an iPad or an android device with at least an 8-inch screen.**

Other items within the course should work fine such as quizzes and documents that are available within the training.

You Can download the Moodle Mobile app from the Apple store and Google Paly. Click below to access the relevant option for your device.

We do want and appreciate your feedback and this can be done via the feedback form that is available at the main course page. This assists us to make your training experience an enjoyable journey.

Regards,

The Innotech training team
